

## Practicum 2: Cascading Stylesheets (CSS)

In this session you will develop Cascading Stylesheets (CSS) for your existing HTML documents.

### Prerequisites

These items **must be complete** in order to continue with the practicum.

- You have successfully created at least 2 print-designs. Please submit these designs.
- You must also provide evidence of your semantically correct HTML documents.
- You must be able to explain every single technical aspect of your documents in detail.

Please read this sheet carefully. Here are your first assignments for the next two hours:

### CSS Layouts

Please develop Cascading Stylesheets (CSS) for all your existing HTML documents. Ideally, you do not need to edit any HTML code for this task. The CSS must be *responsive*, so that it works on different screen sizes (mobile, desktop, etc.).

Develop CSS for the following HTML documents:

- overview / homepage
- detail-view
- poster-designer
- account

Also develop CSS for the rest of your CMS, especially **header** (navigation) and **footer**. Develop CSS for all your print layouts from the last date.

**Important:** Discuss your progress regularly with one of your supervisors. Ask for feedback!

## Design Impulse

In the remaining two hours of your first practicum, you will listen to a short presentation on the topic:

### Typography

- Readability and design rules
- Hierarchies
- Fonts and font-families
- Real-world examples (websites, video games, print-media)

Before your next practicum, you will need to print out your print layouts (at least 1x DinA4 portrait, 1x DinA3 landscape) as a test. You must hand in these printouts during your next practicum. If you do not have access to a suitable printer, ask your supervisors.
